Assembly Language for Intel-Based Computers, 2003, 708 pages, Kip R. Irvine, 0130910139, 9780130910134, Prentice Hall PTR, 2003

This present edition of a widely-used book provides basic information for the beginning programmer interested in computer architecture, operating system, and compiler writing. Using the Intel processor family as its base, and concentrating on the MS-DOS operating system, this complete and fully updated study of assembly language is written clearly and straightforwardly, making it easy to read and understand. A companion CD-ROM with Microsoft Macro Assembler Version 6.15 and TextPad Shareware editor is included, and there is a companion Website maintained by the author. Introduced by a chapter on Basic Concepts, the book covers machine architecture, processor architecture, assembly language fundamentals, data transfers, addressing and arithmetic, procedures, conditional processing, integer arithmetic, strings and arrays, structures and macros, 32-bit Windows programming, language interface, disk fundamentals, BIOS-level programming, and MS-DOS programming.
